## MOFD Consolidated Balance Sheet (FYE 6/30/2018)

\* Deferred Inflows and Outflows of Resources. When GASB (Government Accounting Standards Board) implemented GAS 68, the intent was to put pension plan assets and liabilities on the balance sheet as opposed to demoting them to a footnote. They were to reflect the current position of the pension plan including any current revisions to assets and liabilities. However, since some adjustments are “abrupt” (like a 30% loss in asset value in 2008 or a \$25 million increase in liabilities that would result from decreasing the discount rate by a full percent), the Standards Board created the concept of Deferred Inflows and Outflows of Resources. These are “smoothing” factors that are applied to assets (in the event of earnings outside the projected earnings) and liabilities (due to changes in assumptions). Positive adjustments (to assets) were called Deferred Outflows while negative adjustments (to liabilities) were called Deferred Inflows. So, if the assets earned more than their projected rate (7.00% assumed by CCCERA, MOFD’s pension manager; 6.25% assumed by MOFD itself), then this would be a Deferred Inflow (offsetting part of the “extraordinary” gain in market value). This gain for any one year would be “amortized” over 5 years; 20% in the year of gain; another 20% the next year; etc. However, making an adjustment to an asset by increasing a liability is counter-intuitive. As would considering a decrease in liabilities (lower inflation rate) an additional asset. Thus, this balance sheet has moved decreases to assets back to the asset side of the ledger and decreases in liabilities back to the liability side.

\*\* Further, all of these changes GASB considers “deferred”. It is agreed that rapid changes in assets due to extraordinary asset earnings or losses should be deferred as some of all of these may be reversed in the short term. However, changes to liabilities due to changes in assumptions should not be deferred unless it is relatively certain that the changes will be reversed. Thus this balance sheet show “current inflows and outflows” separate from “deferred inflows and outflows.”

\*\*\* The adjustment to the pension assets came from CCCERA. It was based on their projected earning rate of 7.00%. It shows a net decrease of \$6,058,455. This is the amount that the assets have earned in excess of 7.00% which is being “smoothed” over five years. However, since MOFD’s earning assumption is only 6.25%, this amount should be increased. At this point the data is not available to produce the adjusted value so the CCCERA provided value is used. The increase would be on the order of \$1-2 million.
