PLASTIC MINE ROOF PLATE

Description

The F.M. Locotos Company, Inc., a mine and tunnel roof control product distributor, offers the mining industry a 12" x 12" Plastic Roof Plate for use in long-wall setups. The plastic material offers the following advantages:

- Compatible with plastic/poly mine grid material;
- Smooth Plate with rounded corners will not damage the mesh material;
- Stronger (no knots) more durable than wood header blocks;
- Lighter weight makes installation and handling easier and safer;
- Thinner Plate (0.125") than wood header blocks. Low profile offers more head room, especially useful in lower seams.

The attached pictures show the Plastic Plates being used in a typical long-wall set up.

For more information on the Plastic Plates, please contact the F.M. Locotos Co., Inc. at the above number or email.

Thank you.
